Abstract: The study was conducted to investigate the effect of lumbar mobilization techniques and neural, neural mobilization by Prof. Dr. Samy A. Nasef. Definition: Neural mobilization is a manipulative technique by which neural tissues are moved and stretched either by movement relative to their surroundings, mechanical interface, or by tension development. Nerve mobilization techniques have been recently used as a method to adjust radiating pain related to disk disease and in particular, mobilization techniques for the sciatic nerves improve mobility of the sciatic nerves, decrease mechanosensitivity of the nervous system and heighten compliance of nerve tissues relieving low back pain. Shacklock. Neural mobilization principles and techniques.

Case report: A mobilization technique, spinal mobilization with arm movement for improvement in cervical lesion resulting in pain and other signs below elbow, there is paucity of research evidence supporting its efficacy and are dominated by case report publication. 3. Neural mobilization is based on neurodynamics. Ellis and Hing 2012 conducted a systematic review with the aim to provide an overview of the literature surrounding the therapeutic efficacy of neural mobilization as a treatment option. They concluded neural mobilization is advocated for treatment of neurodynamic dysfunction, neurodynamics is an innovative management tool involving conservative decompression of nerves, various neural mobilising techniques and patient education techniques. Neurodynamics offers a fresh understanding and management strategies for common syndromes such as plantar fasciitis, tennis elbow, nerve root disorders, carpal tunnel syndromes and, this course covers concepts for examination and quantifying restricted neural dynamics and basic intervention strategies for the upper quarter including the cervical spine. Included is a critical review of the most up to date literature in peer reviewed journals regarding the use of neural mobilization as an examination and treatment technique, neural mobilization is a treatment modality used in relation to pathologies of the nervous system.
